

Sarantel GeoHelix® GPS antennas give you a quicker way to market.

They help reduce the design cycle by filtering out unwanted frequencies and by solving all kinds of RF design problems.

For instance, because they're electrically isolated from the platform, they don't detune – you have fewer design iterations to go through.

Filtering is integral, providing attenuation from common cellular and wireless

Get there faster.

services. Moreover, patented PowerHelix™ technology means Sarantel antennas are

balanced and don't need a ground plane, making them easy to embed and exceptionally stable in difficult RF environments.

So, not only can you cut development costs; you'll minimize the size and expense of the RF subsystem for smaller, more powerful handheld devices.

Get in touch, and see why GPS is so streamlined with Sarantel.
