

Modern handheld devices and services like GPS make it easier to communicate and to find your way around. Sarantel GeoHelix® GPS antennas help you make the devices themselves smaller still.

Look at it another way. Because our antennas – which are based on PowerHelix™ technology – are ‘tiny’ and electrically isolated, you can incorporate more powerful features without compromising size or performance. Unlike

It's true. The world is shrinking.

conventional antennas, Sarantel's

don't resonate the whole platform; instead they're balanced, and so offer clear signals in 'RF noisy' devices and complete tuning stability where there's high user interaction.

Add the fact that our antennas require fewer supporting components, and are quicker, simpler and cheaper to integrate or embed, and you'll realize why they're such a forward-looking solution.

Get in touch, and see why GPS is so handy with Sarantel.
